

## Energy Refurbishment in Public Buildings Using EPC in Bergamo

Financing Scheme

### Energy Refurbishment in Buildings in Bergamo

The city of Bergamo has signed a 10-year EPC contract involving approximately 160 public buildings in different actions: energy service, energy refurbishment and maintenance. The contract foresees guaranteed reduction goals in energy consumption.

The contract foresees **guaranteed reduction in energy consumption** following focused refurbishments the financial plan includes **cofinancement through the national incentive scheme "Conto Termico 2.0"**. During the preparatory phases the municipality was supported by AESS which, as a technical advisor, helped gathering and organizing data, auditing buildings and assessing technical systems. The technical advisor is a secondary actor that facilitates the process through its key steps.

### Challenges

City administrations may **not have a solid, centralized data organization**. The input data necessary to deliver audits and to build the baseline were hard to find or in some cases unavailable or poor in quality.

### Energy Savings

- Methane: 1.056 MWh/y expected saving
- District heating: 695 MWh/y expected savings
- Electric energy: 100 MWh/y expected increase
